

More powerful than toxic chemicals. More practical solutions.

Electrolyzed water is recognized as a hospital grade disinfectant and cleaner and has always been more effective than traditional toxic chemicals at killing bacteria, viruses and superbugs like Flu and MRSA. But until Viking Pure developed a patented e-water process, it wasn't easy to obtain or use.

Now, through Viking Pure Solutions, communities like The Hearth have access to natural cleaning solutions that are safe for people, and safe for the environment while killing pathogens almost immediately on contact. The disinfection solution produced by Viking's EPA registered equipment is effective on all surfaces and has been demonstrated to be 80x more powerful than bleach.

"Viking Pure's product, aside from being effective and EPA-approved, is also incredibly easy for our community teams to use. I see them finding creative ways to introduce Viking Pure to their buildings every day, and that brings a great deal of comfort to me, our residents, and their families."

William Hoff - Corporate Director of Environmental Services, Hearth Management

PureClean

Degrease & Decontaminate Surfaces

PureSan

Salt-free & Safe Disinfecting Solution

Strong

Independent efficacy studies show that Hypochlorous Acid, a naturally-occurring chemical and byproduct of electrolyzed water, kills all known bacteria, viruses, fungus and all known antibiotic resistant superbugs quickly. It kills pathogens not only on hard and soft surfaces, but all airborne pathogens as well.

Safe

With no hazardous chemicals and no toxic odors, Viking Pure's patented PureClean and PureSan solutions are completely safe for people and animals. They're also green-certified, and safe for the environment.

Efficient

Viking Pure's solutions are generated on-site, on-demand, so Hearth community teams always have disinfectants available when they need them. In fact, Viking Pure's systems can produce over 100 gallons of safe, natural disinfectant a day.
