Prioritize Your Heart Health With Daily Choices

Please follow advice of your medical professional and speak with them before changing diet, exercise, or supplements. This is for informational use only.

When we think of February, we think of hearts, and it's appropriately the month that observes heart health in America. It's been that way since 1963 when then President Lyndon B. Johnson encouraged citizens to support heart disease solutions for a "nationwide problem of heart and bloodvessel diseases."

There are many actions people can take to combat heart health issues. Awareness of heart health risk factors like high blood pressure, high cholesterol, smoking, diabetes, obesity, poor diet, physical inactivity, and excessive alcohol use is key.

For older adults, specific steps can be taken to improve heart health. Stopping smoking, reducing alcohol consumption to no more than two drinks per day for men and no more than one drink per day for women, and improving physical activity and diet are impactful actions.

Get Active

Getting out for a daily walk is not only good for mental health and weight management, but also for heart health! The World Health Organizations says adults over 65 should do at least 150 minutes of moderate-intensity aerobic physical activity each week—That's just around 20 minutes per day! Aerobic activity should be done in bouts of at least 10 minutes. Making sure to get exercise in every day (as opposed to several times a week) is also helpful.

Heart health can be impacted by stress. Along with a healthy lifestyle, help manage stress with good sleep habits, meditation, exercise, and sharing emotions with family or friends.

Eat Better

Is the way to your heart through your stomach? The Mayo Clinic recommends eating more vegetables and fruits as they may help cardiovascular health. They also recommend whole grains like whole-grain bread and high-fiber cereals. Go for skinless poultry, fish, nuts, and legumes. Monitoring sodium is also important. Items high in salt include tomato juice, soy sauce, and many prepared foods.

Manage Cholesterol

Getting physically active and eating better will go a long way in helping with this last action: managing cholesterol! The first step in improving cholesterol is to seek out a medical professional to find your levels for both cholesterol types. Having your blood pressure taken regularly can help you to know the state of your heart's health. If your bad cholesterol (LDL) is high, make sure to have a health professional help you to monitor it.

Give yourself a Valentine this February with a commitment to improve your heart health!
