# Technology Support Class Summary

Wednesday, November 3rd

**IPHONE**

Subject: iPhone Speak Selection

1. Open Settings > Accessibility.
2. Under the Vision section, tap Spoken Content.
3. Enable Speech Selection. Now, when you select text on your phone, you'll see a Speak option for reading it out loud.
4. If you find it difficult to select text , you can also enable Speak Screen. This lets you drag down from the top of your device with two fingers to read everything on the screen.
5. To tweak how this sounds, select Voices to change the voice, or Highlight Content if you want to follow along with what's being read.
6. If needed, you can also adjust the Speaking Rate using the slider.

Subject: Increase the Text Size

While Display Zoom makes everything on the screen larger, increasing the text sizes will improve overall readability. To adjust text size, follow these steps:
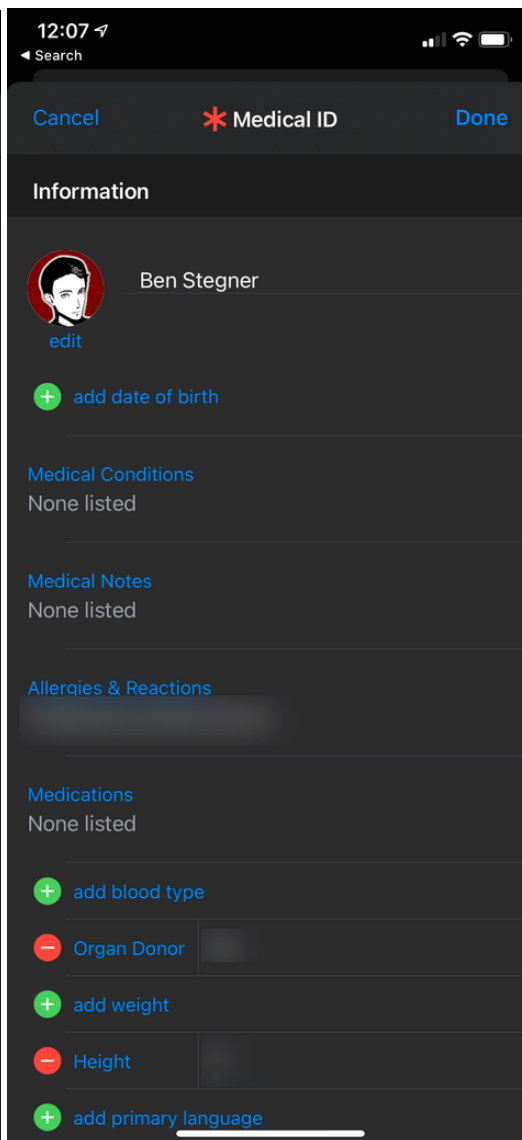

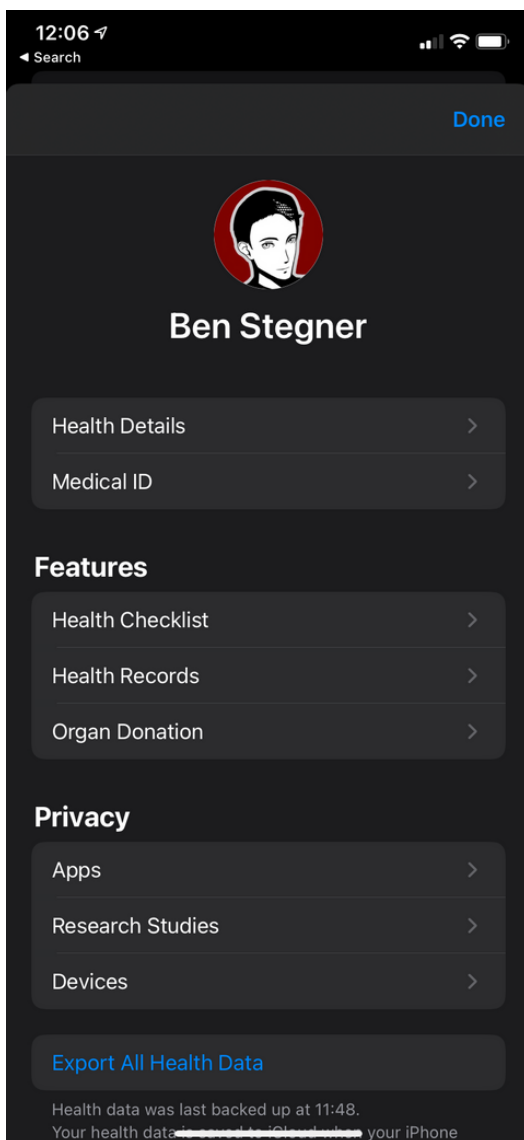

1. Go to **Settings > Accessibility > Display & Text Size** (under the **Vision** heading).
2. Select **Larger Text**.
3. Adjust the slider to choose your desired text size.
4. If the largest option isn't suitable, enable the **Larger Accessibility Sizes** slider at the top to show even bigger levels.

Subject: Set Up Medical ID

Inside your iPhone's Health app is Medical ID, which is akin to a digital medical identification tag. This lets paramedics know of existing health conditions that need immediate attention, medications you take, and similar. It's particularly useful in cases where the device owner is unconscious or otherwise unable to communicate.

1. Set up Medical ID on your iPhone by opening the Health App
2. tapping your profile picture at the top-right,
3. and choosing Medical ID > Edit.
4. Ensure that Show When Locked is enabled, which makes your information available for anyone to see on the lock screen in case of emergency.
5. Aside from medical information, it's wise to add some Emergency Contacts as well.

Subject: Enable Voice Dial for Siri

Siri's voice commands let you cut down on physical interactions with the phone, which is a great way to simplify an iPhone. Enabling Voice Dial grants Siri the ability to make calls from lock screen.

1. Go to **Settings**.
2. Select **Face ID & Passcode** or **Touch ID & Passcode**, depending on your device.
3. Confirm your current passcode to continue.
4. Select **Voice Dial** from the list to toggle it on.
5. You can now tell Siri to call a contact or phone number from the lockscreen.
