WHAT IS THE SUMMER SOLSTICE?

Summer Days are here! Summer begins with the solstice on Friday, June 20, 2025, marking the astronomical first day of summer in the Northern Hemisphere. What exactly IS the summer solstice? Is it really the longest day of the year? Here are some interesting facts.

This solstice in the Northern Hemisphere, occurs when Earth arrives at the point in its orbit where the North Pole is at its maximum tilt (about 23.5 degrees) toward the Sun, resulting in the longest day (most sunlight) and shortest night of the calendar year. On the day of the June solstice, the Northern Hemisphere receives sunlight at the most direct angle of the year.

In the Northern Hemisphere, the June solstice (aka *Summer Solstice*) occurs when the Sun reaches its highest and northernmost points in the sky. It marks the start of summer in the northern half of the globe. In contrast, the June solstice in the Southern Hemisphere is when the Sun is at its lowest point in the sky, marking the start of winter. ☺
