

September 2023

Energy Policy

WWG is committed to minimizing energy consumption, reducing our GHG emissions, and encouraging the use of low-carbon and renewable energy sources. Regular energy audits of our properties will assist in identifying opportunities for energy reduction and efficiency improvements. We are committed to incorporating energy-efficient design principles into our building projects, including proper insulation, renewable energy, passive solar design, and efficient building orientation.

Water Policy

WWG will promote water conservation measures across our managed portfolio, including the use of water-saving fixtures, landscaping practices that minimize water usage, and the implementation of water recycling systems where feasible.

Waste Management and Recycling Policy

WWG is committed to minimizing waste generation, promoting recycling and reuse, and ensuring responsible disposal of waste materials. We aim to implement pollution prevention measures to minimize the release of pollutants such as heavy metals, chemicals, and other harmful substances into the environment, including proper waste management practices and pollution control technologies.

Net Zero Policy

In the face of climate change, we support the worldwide imperative to limit global temperature increases to 1.5 degrees Celsius above pre-industrial levels, in accordance with the Paris Agreement. Our goal is to achieve net-zero carbon emissions across all our managed portfolio by 2050. To achieve net-zero carbon emissions we will pursue three key efforts: 1) reduce energy consumption and support transition to renewable energy sources, 2) Implement energy-efficient technologies and practices and 3) Offset any remaining emissions through verified carbon offset projects.

Green Purchasing and Cleaning Policy

We maintain a company-wide green purchasing and cleaning program to minimize the environmental effects of cleaning and disposable paper products. The agents in cleaning products have the potential to harm human health, damage interior finishes, and negatively impact indoor air quality. Our green cleaning program reduces these chemical, biological, and particulate contaminants, helping protect human health, building operations, and the environment. The program also contributes to the company's green building certifications.
